ABOUT ME

Curious, ambitious, and passionate software engineer who enjoys learning how systems work end-to-end. I like building backend services, digging into failures with logs and metrics. Outside work, I keep learning by building and contributing to projects in Go/Python (web apps and AI-assisted tooling).

EDUCATION

B.Sc. Software Engineering

*GISMA University of Applied Sciences – Potsdam, Germany
Oct 2023 – 2026*

Focus on software development, algorithms, software architecture, and system design.

WORK EXPERIENCE

Intern, AI/LLM Engineering

*MBition – Berlin, Germany
May 2026 – Present*

Built LLM-powered applications that delivered intelligent, scalable solutions for diverse business use cases.

Streamlined operations by optimizing processes and automating workflows with modern AI technologies.

Working Student, Software Engineering

*MBition – Berlin, Germany
Feb 2025 – May 2026*

Designed and developed core backend services for a distributed test bench management platform, providing RESTful APIs for orchestration, scheduling, and control.

Built an orchestration engine to automate test case execution and scheduling, reducing manual testing overhead by 40%.

Architected and maintained a CI/CD pipeline for test updates using GitLab, improving delivery across software releases.

Integrated real-time monitoring and logging for the test pipeline, aggregating multiple sources from test targets for status visibility and failure detection.

Academic Tutor (Python & CS Fundamentals)

*Berlin, Germany
Oct 2023 – Aug 2024*

Designed personalized learning plans aligned with university course content in Python, data structures, and algorithms.

Mentored students through assignments and project work using structured debugging, code review, and problem-solving strategies.

Supported consistent learner progress through hands-on practice, regular feedback, and milestone-based tracking.

PROJECTS

LazyLang

github.com/Lumberj3ck/LazyLang
Go, Bubble Tea, Whisper.cpp, Piper TTS, SQLite, Docker

Terminal-first language learning app: speak to an AI teacher and receive short spoken replies.

Built a full-screen TUI with token navigation and inline one-word translations.
Implemented voice I/O (STT via hosted APIs or local Whisper.cpp; TTS via Piper) and persisted sessions in SQLite.

PassWeb

github.com/Lumberj3ck/pass_web

Go, HTMX, Alpine.js, OpenPGP.js

Built a secure web interface for the Unix **pass** password manager.

Designed and implemented a zero-knowledge authentication flow using PGP challenge-response verification.

Developed a client-side encryption pipeline using OpenPGP.js and engineered a responsive UI with fuzzy search.

Groundhog

github.com/lumberj3ck/groundhog

Go, Ollama/OpenAI, Google Calendar API

AI-powered day management tool that converts free-form notes into structured tasks and calendar events.

Integrated Google Calendar API for automatic event creation and updates.

Supported multiple AI providers (Ollama, OpenAI) through a unified interface.

Persisted user data with SQLite and PostgreSQL backends.

Postcardy

Vue.js, Stripe, JWT

Jan 2024 – Mar 2024

Built a SaaS web app for creating and publishing customizable postcards (about 100 monthly users).

Integrated Stripe payments and implemented JWT-based authentication.

Built publishing for user-selected subdomains and implemented autosave for edited sections.

Additional: [Landing page for Ice Cream Caffe](#), [Hueber Media Telegram Bot](#), [Cinema Website Management](#).

SKILLS

Languages: Python, Go (Golang), JavaScript

Backend: REST APIs, FastAPI, Django, Flask, Pydantic, Celery, Asyncio

DevOps: Git, CI/CD, GitLab, Docker, Bash

Cloud: AWS

Datastores: PostgreSQL, Redis, MongoDB, SQLite

LANGUAGES

English, German, Russian, Ukrainian

INTERESTS

Open-source, backend engineering, developer tools, and building side projects in Go/Python. Outside of tech: gym and meeting people.
