ABOUT ME

Backend software engineer with experience building REST APIs, orchestration systems, CI/CD pipelines, and observability tooling at MBition. Strong in Python and Go, with hands-on work in distributed test infrastructure and LangChain-based AI agents.

WORK EXPERIENCE

Intern, AI/LLM Engineering

*MBition – Berlin, Germany
May 2026 – Present*

Built an AI agent with LangChain to automate recurring internal workflows and common operational tasks.

Designed reusable multi-step agent workflows and components to support additional automation use cases.

Working Student, Software Engineering

*MBition – Berlin, Germany
Feb 2025 – May 2026*

Designed and developed core backend services for a distributed test bench management platform, providing RESTful APIs for orchestration, scheduling, and control.

Built an orchestration engine to automate test case execution and scheduling, reducing manual testing overhead by 40%.

Architected and maintained a CI/CD pipeline for test updates using GitLab, improving delivery across software releases.

Integrated real-time monitoring and logging for the test pipeline, aggregating multiple sources from test targets for status visibility and failure detection.

Academic Tutor (Python & CS Fundamentals)

*Berlin, Germany
Oct 2023 – Aug 2024*

Designed personalized learning plans aligned with university course content in Python, data structures, and algorithms.

Mentored students through assignments and project work using structured debugging, code review, and problem-solving strategies.

Supported consistent learner progress through hands-on practice, regular feedback, and milestone-based tracking.

EDUCATION

B.Sc. Software Engineering

*GISMA University of Applied Sciences – Potsdam, Germany
Oct 2023 – Expected Oct 2026*

Focus on software development, algorithms, software architecture, and system design.

PROJECTS

LazyLang

github.com/Lumberj3ck/LazyLang

Go, Bubble Tea, Whisper.cpp, Piper TTS, SQLite, Docker

Terminal-first language learning app: speak to an AI teacher and receive short spoken replies.

Built a full-screen TUI with token navigation and inline one-word translations.

Implemented voice I/O (STT via hosted APIs or local Whisper.cpp; TTS via Piper) and persisted sessions in SQLite.

PassWeb

github.com/Lumberj3ck/pass_web

Go, HTMX, Alpine.js, OpenPGP.js

Built a secure web interface for the Unix **pass** password manager.

Designed and implemented a zero-knowledge authentication flow using PGP challenge-response verification.

Developed a client-side encryption pipeline using OpenPGP.js and engineered a responsive UI with fuzzy search.

Postcardy

Python, FastAPI, Pydantic, Vue.js, Stripe, JWT

Jan 2024 – Mar 2024

Built the Python/FastAPI backend for a SaaS postcard publishing platform serving about 100 monthly users.

Developed RESTful APIs using Pydantic validation, dependency injection, and automatic OpenAPI documentation.

Implemented JWT authentication, Stripe payment workflows, autosave, and publishing to user-selected subdomains.

SKILLS

Languages: Python, Go (Golang), TypeScript, JavaScript, SQL, Bash

Backend: FastAPI, Django, Flask, Node.js, Pydantic, Celery, Asyncio, OAuth 2.0, OpenID Connect (OIDC), JSON Web Tokens (JWT)

APIs & Architecture: RESTful APIs, GraphQL, gRPC, Microservices, Distributed Systems, Event-Driven Architecture, System Design

Databases & Messaging: PostgreSQL, MongoDB, Redis, SQLite, RabbitMQ

Cloud & DevOps: Amazon Web Services (AWS), Docker, Kubernetes, Terraform, Linux, Git, GitLab CI/CD, GitHub Actions

Testing & Observability: Pytest, Unit Testing, Integration Testing, Test-Driven Development (TDD), Prometheus, Grafana

Soft Skills: Leadership, Communication, Problem-Solving, Team Collaboration

LANGUAGES

English (C1), German (A2), Russian (Native), Ukrainian (A2)

INTERESTS

Open-source, backend engineering, developer tools, and building side projects in Go/Python. Outside of tech: gym and meeting people.
